

February's Round Table Discussion Recap

by Ron Moyer, RMC Facilities Services, Inc.

For the month of February 2005 the Roundtable topic discussion centered on Technology for FM's and was attended by Jan Stephens of FCS Telecom Business Group, Don Clark, Aerospace Corporation, Todd Bothel, Keith Myers and Ron Moyer of RMC Facilities Services Inc. Those of you who did not attend or were not on the conference line really missed out on the discussion topics of the use of Voice over IP (VoIP) as well as branching out to laptop use in WI FI applications. This is a topic that all of us will be using in the future even at our own sites. The majority of our meeting attendees were using Blackberry or PDAS units to keep in touch with email as well as other areas of needs. We also discussed using Outlook and Lotus notes as a calendaring service and how it connects to every thing else we do on the computer to make us more organized. This meeting was truly a wake up call as to the importance on keeping up with the current technology available to our FM growth.

Next months topic will be on Security Technology and who can provide us the necessary services that are essential to our future needs.
